

ABSTRACT

A roof structure (20) for a vehicle (10) comprises a rear roof part (24), which comprises a vehicle rear window (26), side, rear pillars (27) and a rear segment (25) of the vehicle roof and is displaceably borne in the vehicle longitudinal direction (B). In addition, a forward roof part (22) is provided that is attachable adjacent to a windshield frame (11) of the vehicle and is removable from the roof structure (20); its length in the vehicle longitudinal direction corresponds to the displacement path of the rear roof part (24). Lastly, the roof structure (20) comprises rear, side elements (28), which are attachable adjacent to the rear roof part (24) and are removable from the roof structure (20); their length in the vehicle longitudinal direction corresponds to the displacement path of the rear roof part.
